New Future Scenarios

There will be 9,6 billion mouths to feed in 2050

We will exchange Whatsapps with our fridge!

Urban farms are coming, growconsumers appear

Geneticists, biochemists and data scientists reinvent food

The vegetable egg is already a reality

New Future Scenarios

Environment
&
Society

Science
&
Technology

CHALLENGE:
MODERNIZATION OF EDUCATIONAL METHODOLOGIES IN
FOOD-RELATED SECTORS

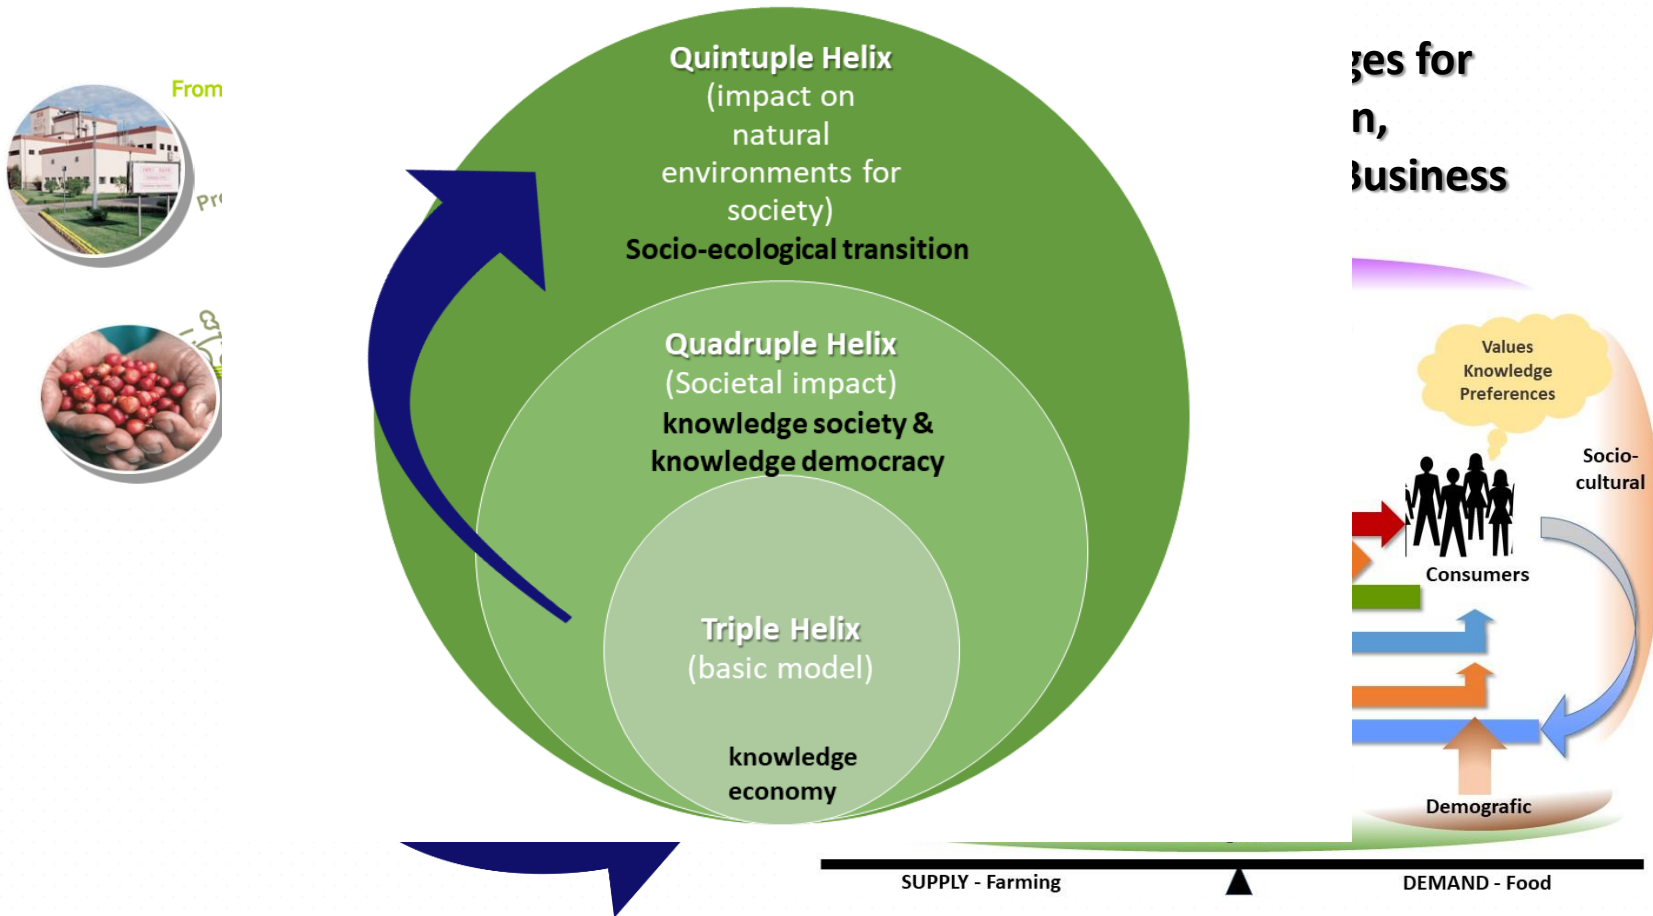

Digitalisation
New interfaces with non-
food sciences

End-users
(students/trainees)

Food System & Innovation

**CHALLENGE:
IMPROVEMENT OF ACADEMIA-BUSINESS AND STAKEHOLDERS
INTERACTION**

New, future «food related» professions

TREND
Data Analyst, the most in-demand job of the coming years

TREND
How digital innovation is changing the face of business

CHALLENGE
LEVERAGE OF INNOVATIVE AND ENTREPRENEURIAL MINDSET OF THE FUTURE
GENERATION OF GRADUATES OF FOOD (RELATED) STUDIES

What is a food engineer?

- **Food engineering** is a multidisciplinary field which combines **microbiology**, applied **physics**, **chemistry** and **engineering** for food and related industries.
....
- Food engineers provide the **technological knowledge transfer** essential to the **cost-effective** production and commercialization of food products and services.

EgoFood

How will the future working place of food engineers look like ?

Current Situation of university degree programmes

- the development of skills during the university degree programmes are **not sufficiently** focused on the improvement of those that are actually required in the workplace
- a **lack of practical experience** results in difficulties for understanding the problems of a modern manufacturing and processing workplace as well as to develop basic intrapreneurial skills
- **education methods** are too often **outdated**, less effective and sometimes using obsolete tools and equipment

What skills and competences are required?

Several studies and projects have analysed the needs of possible employers, identifying

technical competences also e.g. in food **legislation** and control, food **safety** management, etc., and

soft skills including **communicating, critical thinking** and problem solving, product development, etc.

How can required skills and competences been

1. Identified ?

2. Achieved ?

A NEW CIVIC DISCOURSE

Market And Consumption Trends Are Rearticulating The Identity Of Consumers And Communities In A Global Society.

It's not just a matter of market share and consumption trends. Food is one of the rare commodities for which the potential market is 100% — everyone needs it.

The future of food is undoubtedly changing, but while many of us have dabbled in UberEATS, few have substituted meals with bottled drinks, or chocolate bars with grasshopper bars.

Our established relationship with food may well be what stands in the way of its disruption. So, can we disrupt it in a way that allows us to keep our relationship with food? For example, the social aspects of eating are sustenance for another part of our human needs — can they be bundled and commoditized too? Perhaps they can — the Nourished Project has explored using virtual reality to make users believe they are eating delicious foods.

SIGNALS

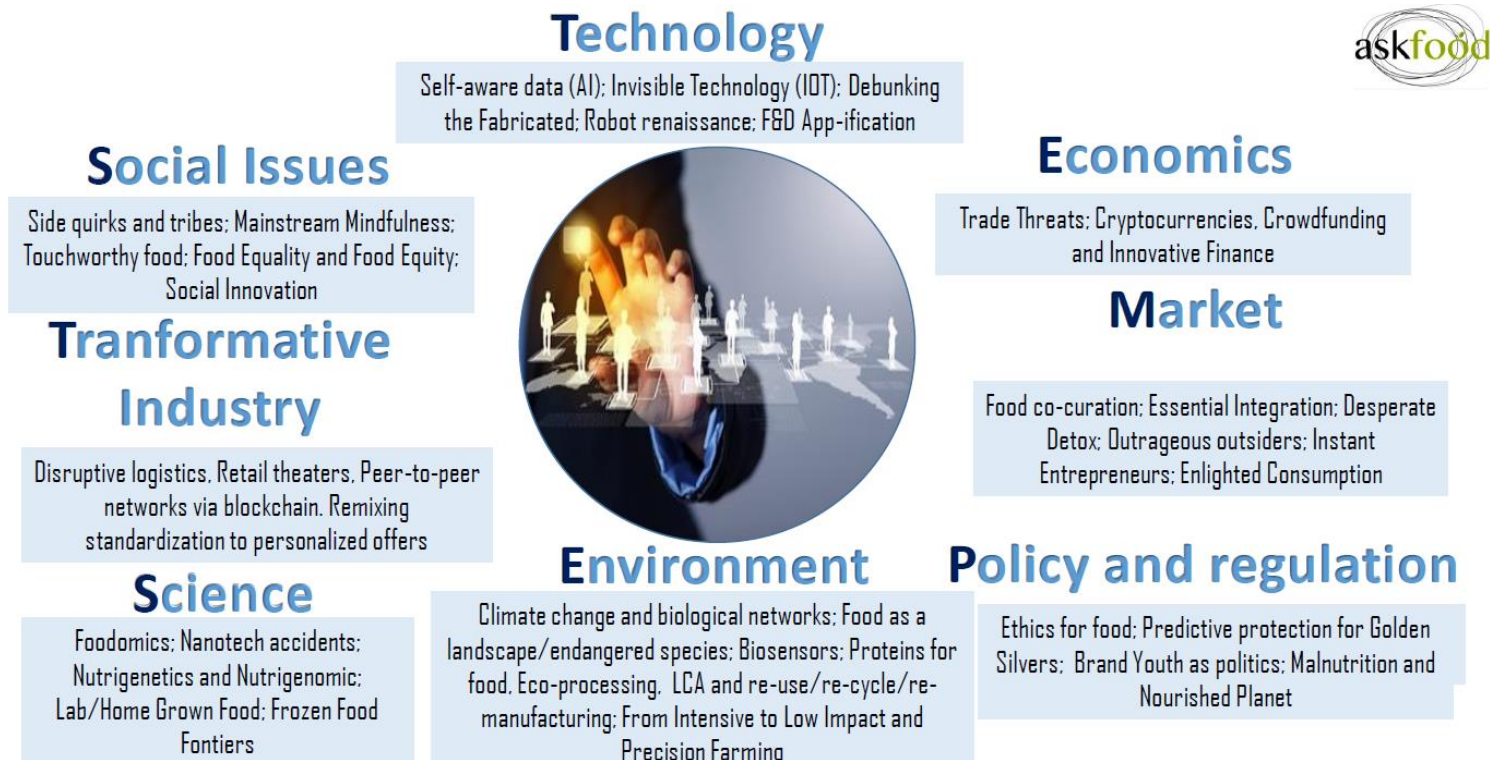

**Interactive Gap identifier
(under construction)**

The tool collects, connects, ranks and explains, emerging future trends that will produce significant challenges for future skills required by the food sector

<https://www.askfood.eu/tools/forecast/>

8 power-breaking forces (Technology, Economics, Market habits, Policy and regulatory framework, Environment, Science, Transformative industry, Social issues) were identified that will shape the competitive scenario and demand of skills and jobs in the next years.

For each power-breaking force (TEMPESTS):

- **5 trends**
- **10 signals**

have been described and included in the website

TRENDS

- Each trend is completed by a description of emerging, missing and confirmed **skills** (generic, technical and soft) and **jobs**.
- Skills and jobs are described according to the ESCO (European Skills, Competences, Qualifications and Occupations) classification <https://ec.europa.eu/esco/portal>

AMPLIFIED INTERSECTIONS

Different Mixtures Are Changing The Way To Think About The Food Sector: It's A New Game-Set, A Different Web Altering The Usual Ways We Consider The Value Chains.

Trends are “profits waiting to happen”, as Chris Sanderson from the Future Laboratory uses to say. In the business world, “transformational change” involves a company making a radical change in

its business model, often requiring changes in company structure, culture and management. “Transformational industry” means that, over the next two decades, the traditional food value chains (agriculture and stewardship; manufacturing and branding; distribution and logistics; retail and information; consumption and taste; disposal and renewal) will be reshaped by a totally new set of complex relationships, that is re-arranging the value-chains from efficiency to flexibility and include more and more daily and disruptive intersections with other industries.

Different Mixtures Are Changing The Way To Think About The Food Sector: It's A New Game-Set, A Different Web Altering The Usual Ways We Consider The Value Chains.

Trends are “profits waiting to happen”, as Chris Sanderson from the Future Laboratory uses to say. In the business world, “transformational change” involves a company making a **radical change in its business model**, often requiring changes in company structure, culture and management. “**Transformational industry**” means that, over the next two decades, the **traditional food value chains** (agriculture and stewardship; manufacturing and branding; distribution and logistics; retail and information; consumption and taste; disposal and renewal) will be reshaped by a totally **new set of complex relationships**, that is re-arranging the value-chains from **efficiency to flexibility** and include more and more daily and disruptive **intersections with other industries**.

TRENDS

HYBRIDIZATION

Cross-sector comparison is not anymore limited to get some inspiring insights on innovation trends. Now it's sectors, by using food as driver for a new multi-sector convergence.

[*Read More*](#)

BLOCKCHAIN-BASED NETWORKS AND TRUST

The blockchain is pretty technical at its core, but basically it's a way for digital information to be stored and distributed in a peer-to-peer network.

[*Read More*](#)

REMIXING STANDARDIZATION

A new era in personalization is dawning due to the expansion of online and mobile food shopping. Food safety and quality standards new model of standardization emerge.

[*Read More*](#)

BLOCKCHAIN-BASED NETWORKS AND TRUST

Affected skills:

Technical skills (i.e. Software development; Food production; Food distribution; Blockchain Developer; Development of interactive front-end designs for apps; Backend development pertaining to Blockchain; Supervision of the entire stack running their apps)

General skills (Perform detailed processing operations; Coding; Development of Smart Contracts)

Soft skills (Flexibility; Stay relevant; Intuition of decentralization potential)

Future jobs:

Core Blockchain developer;
Blockchain software developer

Sustainability For A New
Industrial (R)Evolution

Glocal Micro Systems

Productive Production

Renaissance In Food
Processing And Handling

- Value-chain squeezing through innovation in food processing and handling
....
- Emerging market growth, urbanization, and rising living standards. **Steady growth in emerging markets, urbanization, and rising living standards are causing a dietary shift to higher-value-added product**, ...
- **Changing consumer preferences.** An increasing **focus on health** (organic and healthier food) is driving product and menu expansion and the need for **higher standards** and **traceability**.
- **Increased demand for convenience food.** ... is driving innovation in **flexible packaging**.
- **Operational challenges and cost pressures.** Customers are demanding machines that improve operational efficiency, reduce costs, and increase uptimes, leading to **new requirements for automation, energy efficiency**, and integrated solutions.

New skills for new jobs

The Forecast Aggregator (TEMPESTS model)

The screenshot displays the TEMPESTS model interface. On the left is a vertical sidebar with icons and labels for various categories: Technology, Economics, Market habits, Policy and regulatory framework, Environment, Science, Transformative industry, and Social dynamics. The main content area is titled "A NEW CIVIC DISCOURSE" and features an article with a photo of a restaurant kitchen. The article text discusses market and consumption trends, the future of food, and the social aspects of eating. Below the article is a section titled "SIGNALS" with five small images: a person with thought bubbles, a plate of food, a DNA helix, a sticky note that says "Got Ethics?", and a person holding a smartphone next to a plate of food.

Interactive Gap identifier
(under construction)

ASKFOOD Interactive Training Gap Identifier

A interactive repository of tools for self-assessing the existing skills and identify the gap between the actual and the emerging skills.

The tool collects a list of **Jobs** with related **Competencies** and **Skills** and will have an **Interactive tool to self assess** personal profile.

This can help:

- a) individuals who have to define their personal learning strategies
- b) food companies that have to set hiring requirements
- c) training providers to deliver effective trainings

3 Group of Professional profiles :

- A. related to **Food Services**
- B. related to **Food Quality Assurance**
- C. related to **Food Research and Development**

Identified according to ESCO analysis (ESCO, multilingual classification of European Skills, Competences, Qualifications and Occupations, as part of the Europe 2020 strategy)

ASKFOOD PERMANENT OBSERVATORY

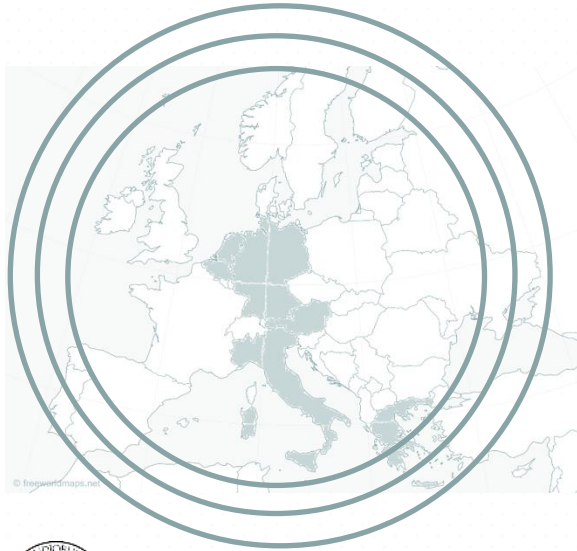

**ASKFOOD
PERMANENT
OBSERVATORY**
on innovations in
food & education

SUMMARY

- **Innovative education & training** targeted towards the needs of the industry is a key for the success of the industry
- **Rapid developments in technology and educational methodology** require:
 - a **permanent monitoring** of the needs
 - a **flexible demand driven** innovative **education** and **continual professional development** for **food professionals** and **teachers/trainers**

Thank you for your attention
